-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lange et al in view of Baba .

Lange et al discloses control system for electric actuator comprising actuator r drawing variable current level during operation, current level detection and generating current level signal; digital control component generating first control signal; comparator device for receiving first control signal and current level signal and generating comparison signal and control component to control current level to actuator, see fig 2, col 6 lines 60-68, and col 7 lines 45-55, and col 8 lines 10-25, and 40-50 and 55-65. Lange et al lacks disclosing linear actuator. Baba discloses linear actuator, see col 7 lines 1-35. It would have been obvious to one of ordinary skill in the art to combine the control system of Lange et al with linear motor, since a linear motor, is a type of motor.

3. Claim 1-28 is allowed.
